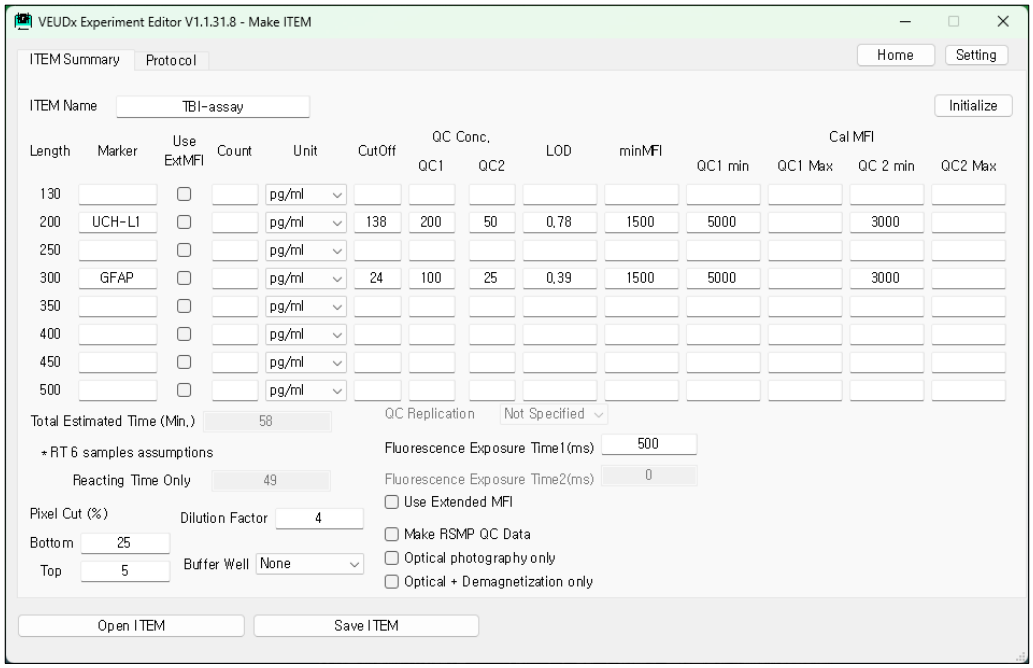
4. Make ITEM

4.1 ITEM creation start screen

4.1.1 Start screen

ITEM Open, save and edit are possible.

- In the ITEM Summary tab, you can edit the item name, maker name by RSMP length, unit, CutOff, QC High/Low Range, QC Replication, pixel cut, experiment time, Dilution Factor, Fluorescence Exposure Time, Optical photography only, etc.
- You can edit steps in the Protocol tab



- You must input information about the name, unit, and RSMP Length of the markers to be used for the item.
- Based on the input information, the fluorescence image is detected by RSMP Length and the result is calculated.

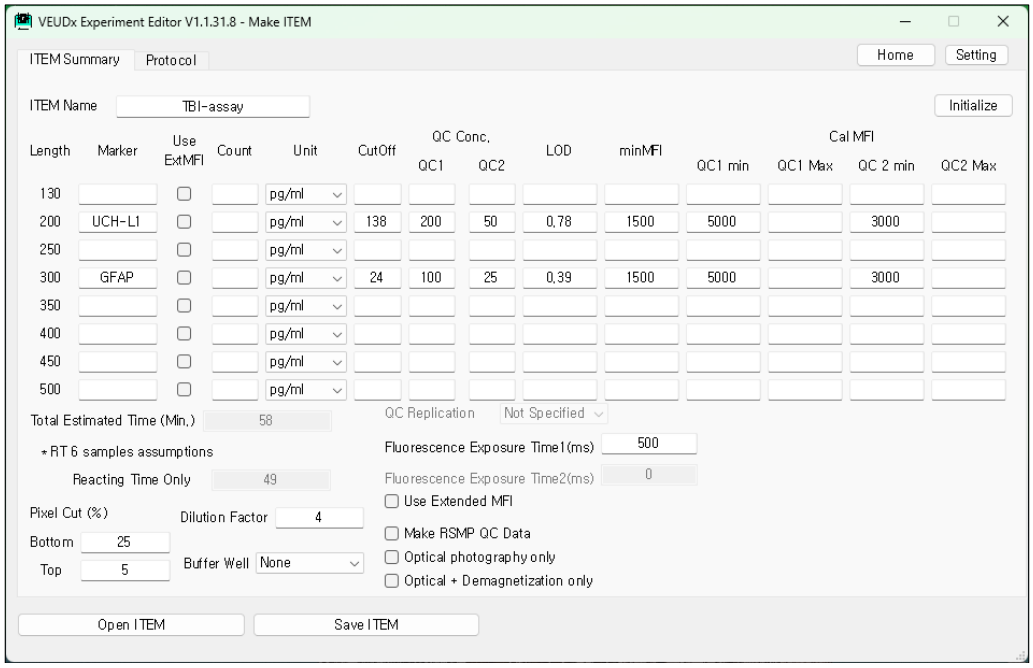
4.2 Edit ITEM Summary

4.2.1 Open ITEM

Press the “Open ITEM” button to select the previously created ITEM file.

ITEM files are in *.zip. (ex, VEUDxITEM_TBI.zip)



4.2.2 Edit ITEM Summary

Editable below items

- Item name
- Marker name used by RSMP length
- Unit used by RSMP length
- CutOff for Result(Positive/Negative)
- QC High/Low Range

If you want to use a different concentration unit, you can add a concentration unit in ‘Setting’

- Pixel Cut Bottom, Top (%)

  Remove noise caused by saturation when obtaining MFI.

  Defaults to Bottom 25% Top 5%.

- Dilution Factor

The calculated concentration value is multiplied by the 'dilution factor' value.

- Fluorescence Exposure Time

The default value of Fluorescence Exposure is 500ms.(1~1000)

If the MFI value of the item you are using is high or low, adjust the 'Fluorescence Exposure' value.

(High MFI values can affect fluorescence saturation)

- Optical photography only

Check if you only want to image capture and Detecting

(RSMP is demagnetized)

- Optical + Demagnetization only

Check if you only want to image capture and Detecting

(RSMP is not demagnetized)

(RSMP should be in imaging well 8)

- Make RSMP QC Data

If you select the 'Make RSMP QC Data' Option, you can acquire MFI, CV(%) values for each RSMP and for the entire RSMP.

(Used to check RSMP Ab coupling QC status)
